Menambahkan codingan untuk membuat fungsi search di halaman product

```
<div className="mt-20 px-4">
  {/* Input Pencarian */}
  <div className="flex justify-center mb-8">
    <label className="input input-bordered flex items-center gap-2 w-full max-w-md">
      <input
        type="text"
        className="grow"
        placeholder="Search"
        value={searchQuery}
        onChange={(e) => setSearchQuery(e.target.value)}
      />
    </label>
  </div>
</div>
```
